Payroll by Job Title (Top Roles)

Insights: Total payroll with benefits **increased steadily from 2011 to 2014**, reaching approximately **\$3.8B in 2014**. Benefits data in 2011 is not recorded in the dataset, which affects early-year comparisons. Overall growth is driven by increases in payroll and benefits contributions, reflecting rising compensation costs and workforce changes over time.

What Drives Payroll & Benefits Costs?

Identifying key drivers of payroll across job roles, agencies, and pay components

Payroll Breakdown Drivers

Key Factors Influencing Payroll

Key influencers Top segments

What influences Payroll Band to be High ?

Insights: Payroll is primarily driven by job title, with high-cost roles such as **Firefighter, Registered Nurse, and Transit Operator contributing significantly to total payroll**. The updated payroll band analysis further confirms this pattern, showing that a relatively small proportion of employees in the high payroll band account for a large share of total payroll. In contrast, lower-cost roles, such as **Orthopedic Technician I and Warehouse Worker, contribute minimally**, indicating a highly concentrated payroll structure dominated by a small number of key occupations.

How Does Payroll Distribution Change by Perspective?

JobTitle

Year

Payroll Distribution by Job Title and Salary Band

Insights: Payroll is unevenly distributed across salary tiers, with the **High payroll band contributing the largest share of total payroll. The Medium and Low bands contribute less, showing that payroll is concentrated among higher earners.** This pattern is consistent across job titles and years, indicating that **salary level is a key driver** of payroll distribution.

Total Payroll With Benefits

Original vs Simulated Payroll by Year

Insights: Increasing overtime leads to a rise in total simulated payroll. A **10%** increase in overtime results in an additional **~\$75.31M** in payroll, representing a **0.5%** increase overall. This simulation isolates the impact of overtime by keeping base pay, other pay, and benefits constant. High-overtime roles, such as **Firefighter and Emergency services contribute the most to this change**, showing that overtime policy adjustments can significantly affect total payroll costs.

Payroll Forecast & Trend Dashboard

Projecting payroll trends over the next two years and highlighting high-cost roles

Payroll Trend and Forecast

Insights: Payroll is expected to increase over the next two years, reaching about **~\$4.28B in 2015 and ~\$4.65B in 2016**. The forecast includes a confidence range that shows possible variation in the results. This upward trend follows historical growth, with high-cost roles, such as **Firefighter and Head Attorney positions**, remaining key drivers of total payroll.
